respondents. Furthermore, new sections have been added on: Direct Analysis, Torsional and flexural-torsional buckling of columns, Filled HSS columns, and Composite column interaction. More real-world examples are included in addition to new use of three-dimensional illustrations in the book and in the image gallery; an increased number of homework problems; and media approach Solutions Manual, Image Gallery.

### **Basic Steel Design**-Bruce Gilbert Johnston 1980

**Design of Steel Structures**-Elias G. Abu-Saba 2012-12-06 This book is intended for classroom teaching in architectural and civil engineering at the graduate and undergraduate levels. Although it has been developed from lecture notes given in structural steel design, it can be useful to practicing engineers. Many of the examples presented in this book are drawn from the field of design of structures. Design of Steel

Structures can be used for one or two semesters of three hours each on the undergraduate level. For a two-semester curriculum, Chapters 1 through 8 can be used during the first semester. Heavy emphasis should be placed on Chapters 1 through 5, giving the student a brief exposure to the consideration of wind and earthquakes in the design of buildings. With the new federal requirements vis a vis wind and earthquake hazards, it is beneficial to the student to have some understanding of the underlying concepts in this field. In addition to the class lectures, the instructor should require the student to submit a term project that includes the complete structural design of a multi-story building using standard design procedures as specified by AISC Specifications. Thus, the use of the AISC Steel Construction Manual is a must in teaching this course. In the second semester, Chapters 9 through 13 should be covered. At the undergraduate level, Chapters 11 through 13 should be used on a limited basis, leaving the student more time to concentrate on composite construction and built-up girders.

The book comes with problem-solving software tied to chapter exercises which allows student to specify parameters for particular problems and have the computer assist them. On-screen information about how to use the software and the significance of various problem parameters is featured. The second edition reflects the revised steel specifications (LRFD) of the American

Institute of Steel Construction.

**Structural Steel Design**-Abi O. Aghayere  
2020-01-23 Structural Steel Design, Third Edition is a simple, practical, and concise guide to structural steel design - using the Load and Resistance Factor Design (LRFD) and the Allowable Strength Design (ASD) methods -- that equips the reader with the necessary skills for designing real-world structures. Civil, structural, and architectural engineering students intending to pursue careers in structural design and consulting engineering, and practicing structural engineers will find the text useful because of the holistic, project-based learning approach that bridges the gap between engineering education and professional practice. The design of each building component is presented in a way such

that the reader can see how each element fits into the entire building design and construction process. Structural details and practical example exercises that realistically mirror what obtains in professional design practice are presented. Features: - Includes updated content/example exercises that conform to the current codes (ASCE 7, ANSI/AISC 360-16, and IBC) - Adds coverage to ASD and examples with ASD to parallel those that are done LRFD - Follows a holistic approach to structural steel design that considers the design of individual steel framing members in the context of a complete structure. Instructor resources are available online by emailing the publisher with proof of class adoption at [info@merclearning.com](mailto:info@merclearning.com).

**LRFD Steel Design Aids, 4th Edition**-Zahid Ahmad Siddiqi 2018-01-15 After the publication of the third edition of this book, new AISC Specification was released in 2010 that contains combined provisions for ASD and ARFD methods and formulas in non-dimensional format to be

used both for the FPS and the SI units. This fourth edition is prepared after revising the original book in the light of the new Specification of AISC 2016. The book contains tables required for the 345 Grade Steel and BS sections. The author is highly thankful to all the engineers and students who have participated in the improvement of this book through their questions and queries. As before, the detailed design procedure of the steel structures is explained in a separate book titled "Steel Structures" which frequently refers to this book for the properties tables and the design aids. Suggestions for further improvement of the presentation will be highly appreciated and will be incorporated in the future editions.
